ACID Pro 6.2 Key Features Audio Quantizing Audio Quantizing is the process of transforming your audio into a waveform format called Audio Spectrum. This process minimizes the size of your audio files, making them easier to work with and move around. You can increase and decrease the audio quantizing effect with the Audio Quantize effect in ACID Pro 6. You can also use Audio Quantizing to convert audio data into MP3 or WAV audio file format. Looping The Loop Edit mode in ACID Pro 6 is a new way of editing loops. ACID Pro 6 allows you to record and sequence audio and MIDI input into new or existing tracks, and then record, or 'loop' the audio input, while playing back the MIDI data. ACID Pro 6 software lets you record and loop audio and MIDI (keyboard) data simultaneously. When you record audio or MIDI into a track in ACID Pro 6, you can choose to automatically sync this data to the current BPM of the track or record the data separately into a reference track.
